

Dataset: <https://huggingface.co/datasets/qiaojin/PubMedQA>

We used the PubMedQA dataset from hugging face.

Contributions

Srijan

Srijan primarily worked on writing up the project report, assisting in writing the introduction section, and writing out the entire methods, experiments and results, and conclusion section. Srijan also made the visualizations from the outputted quantitative results. Srijan also assisted with research on what models to use for the project, what metrics to use, and what fine tuning methods to use.

Vijay

Vijay worked on both writing the project report and writing code. On the project report, Vijay wrote out the introduction and background section. In the code, Vijay helped in writing the LoRA fine tuning and evaluating sections, assisting in writing out the code for LLM-as-a-judge. Vijay also assisted in writing the cosine similarity and coherence functions.

Evan

Evan worked primarily on writing code for the project, giving assistance and clarity in writing the project report as well. Evan wrote out the code for getting the models from hugging face, getting the dataset from hugging face, refactored the LoRA fine tuning code, wrote the code for cosine similarity and LLM-as-a-judge coherence criteria and refactored Vijay's code to make it more readable, and ran the models on his instance in google colab.
